

What is operation & maintenance (O&M) of photovoltaic (PV) systems?

This guide considers Operation and Maintenance (O&M) of photovoltaic (PV) systems with the goal of reducing the cost of O&M and increasing its effectiveness. Reported O&M costs vary widely, and a more standardized approach to planning and delivering O&M can make costs more predictable.

Do photovoltaic systems need maintenance?

The expansion of photovoltaic systems emphasizes the crucial requirement for effective operations and maintenance, drawing insights from advanced maintenance approaches evident in the wind industry. This review systematically explores the existing literature on the management of photovoltaic operation and maintenance.

How do I manage a fleet of PV systems?

Operating and maintaining a fleet of PV systems requires active resource management and data acquisition and analysis by the asset and operation manager(s). Outsource the service to a specialized third-party O&M provider.

What services are provided by a PV system?

commissioning to the 30+ years of operation each PV asset is expected to deliver. Examples of such services include rooftop modelling, shading analysis, construction progress monitoring, and capture for marketing materials. 5.6.4. Monitoring connectivity and security

Why is PV system operations a growing field?

PV system operations is a growing field because increasing PV penetration into the larger utility system, and an emerging market for ancillary services (e.g., dispatch of storage, sourcing reactive power, curtailment of output) require more system interaction on an ongoing basis.

What are NREL's best practices at the end of photovoltaic system performance period?

NREL's Best Practices at the End of the Photovoltaic System Performance Period report includes recommendations for system owners, asset managers, and industry service providers regarding the handling and disposal of waste, including reuse and recycling of PV modules and other components as a way to reduce environmental impact.
