

What is operation & maintenance (O&M) of photovoltaic (PV) systems?

This guide considers Operation and Maintenance (O&M) of photovoltaic (PV) systems with the goal of reducing the cost of O&M and increasing its effectiveness. Reported O&M costs vary widely, and a more standardized approach to planning and delivering O&M can make costs more predictable.

Do photovoltaic systems need maintenance?

The expansion of photovoltaic systems emphasizes the crucial requirement for effective operations and maintenance, drawing insights from advanced maintenance approaches evident in the wind industry. This review systematically explores the existing literature on the management of photovoltaic operation and maintenance.

What should a documented PV system O&M plan include?

A documented PV system O&M plan for a system or fleet of systems should include the following (depending on system size, complexity, and investment): List of responsible-party contact information including site owner and offtaker of power, utility, local jurisdiction, local landowner, as well as emergency numbers.

What services are provided by a PV system?

commissioning to the 30+ years of operation each PV asset is expected to deliver. Examples of such services include rooftop modelling, shading analysis, construction progress monitoring, and capture for marketing materials.

5.6.4. Monitoring connectivity and security

Do solar PV systems need a professional inspection?

Ensure provisions are made for a competent person to carry these out, as necessary. As with other installed technology and appliances (for example, domestic and commercial boilers), all solar PV systems need professional inspection and maintenance to identify and resolve technical and other problems.

How do asset owners manage a fleet of PV systems?

The asset owner or asset manager should allocate sufficient internal resources and secure any required external resources to implement the O&M plan. Operating and maintaining a fleet of PV systems requires active resource management and data acquisition and analysis by the asset and operation manager(s).
