

Positioning of punching die for photovoltaic bracket

How to design a multi-station progressive die?

The layout of the multi-station progressive die should comply with the layout principle of an ordinary punching die and consider the following points. The Result of the Layout Design of the Multi-station Progressive Die is the Layout Drawing. Once the Layout Drawing is Determined, the Following Aspects are Determined.

How to design a progressive die?

In the design of progressive die, to achieve the complex parts (such as bending, deep drawing, forming, and other processes of the stamping parts) stamping or simplifying the structure of the die, the complex shape and inner shape of the hole is usually cut several times.

How does hole size affect the utilization rate of a progressive die?

The leading pinhole of the progressive die is mostly arranged on the carrier of the strip (it can also be arranged on the hole of the process part). Therefore, the size of the hole diameter of the leading pin directly affects the utilization rate of the material.

selected for design among 3 types of dies: simple punching die, compound punching die, and progressive punching die. The design process of the progressive die is complex, the amount ...

The annual production capacity of AKCOME solar mounting system is 4G, which is in the forefront of China's PV mounting bracket industry. AKCOME has always paid attention to product ...

The annual production capacity of AKCOME solar mounting system is 4G, which is in the forefront of China's PV mounting bracket industry. AKCOME has always paid attention to product quality management, and performs strict quality ...

et al. conducted research on column biaxial solar photovoltaic brackets, studying the structural loads at different solar altitude and azimuth angles. Conduct static analysis and optimization ...

There are 6 working stations: punching and guiding hole, two small holes, and the middle square hole at the first working station; Open position at the second station; The third and the fourth...

The mounting bracket of the front bumper spotlight of the automobile is mainly produced by the method of wire cutting and processing. This method is difficult to achieve mass production and ...

Top-of-the-pole brackets. The top-of-pole solar bracket is a mounting system used to securely install solar panels on top of a pole or post. It is designed to provide stability and optimal positioning for the solar panels,

Positioning of punching die for photovoltaic bracket

...

an L-shaped 90° angle, and the punching process realizes the acquisition of 27 apertures. In order to improve productivity and to combine the characteristics of the parts, a set of the ...

Photovoltaic Bracket Punching and Forming: A Testament to Quality. The export project involving photovoltaic bracket stamping originated from a renowned German photovoltaic company, ...

Jiangsu Guoqiang SingSun Energy Co., LTD. is located in Liyang City, Changzhou, Jiangsu Province, with more than 1,700 employees Guoqiang SingSun, as a service provider focusing ...

Angle punching, making, and shearing machines play an important role in the production of solar photovoltaic brackets. ? These production lines use highly automated technology to efficiently...
