

# Power factor verification standard for energy storage systems

Can FEMP assess battery energy storage system performance?

This report describes development of an effort to assess Battery Energy Storage System (BESS) performance that the U.S. Department of Energy (DOE) Federal Energy Management Program (FEMP) and others can employ to evaluate performance of deployed BESS or solar photovoltaic (PV) +BESS systems.

What are the grid code specifications for grid energy storage systems?

The Grid Code Specifications for Grid Energy Storage Systems are determined according to Table 3.1, and as a rule, they are not dependent on the rated capacities or specifications of other production or demand systems connected to the same connection point.

What is the energy storage standard?

The Standard covers a comprehensive review of energy storage systems, covering charging and discharging, protection, control, communication between devices, fluids movement and other aspects.

What is k-factor in grid energy storage system?

K-factor: Defines a grid energy storage system's fault current feed in relation to the remaining voltage during a fault. where  $I_r$  is the reactive current,  $I_n$  is the grid energy storage system's nominal current,  $V_r$  is the remaining voltage during the fault,  $V_n$  is the nominal voltage.

What data is required for a Type C grid energy storage system?

For type C grid energy storage systems, the data specified in tables 7.2 and 7.3 must be delivered. The grid energy storage system owner shall submit this grid energy storage system data to the relevant network operator as electronic documents after the commissioning testing.

What is energy storage system product & component review & approval?

**3.0 Energy Storage System Product and Component Review and Approval** The purpose of this chapter is to provide a high-level overview of what is involved in documenting or validating the safety of an ESS, either as a complete 'product' or as an assembly of various components.
