

Replacing capacitors in photovoltaic inverters

What causes harmonics and power factor reduction in single-phase PV inverters?

Harmonics and power factor reduction occur in single-phase PV inverters because the DC bus voltage exhibits a double frequency ripple. In order to reduce this ripple, large electrolytic capacitors, which have short lifetimes, are often used at the DC bus.

Why is DC-BUS capacitor important in PV inverters?

In standalone and grid-connected PV structures, DC-Bus capacitor is the extremely important passive component. Harmonics and power factor reduction occur in single-phase PV inverters because the DC bus voltage exhibits a double frequency ripple.

Do film capacitors cause voltage fluctuations?

These film capacitors have low capacitance, which causes severe oscillations in the output current, and voltage drop due to huge ripples on the DC-Bus voltage. In this research, the main goal is to eliminate the output current ripples and voltage fluctuations associated with employing film capacitors.

Can I use thin film capacitors on a PI controller?

The bus voltage overshoot and undershoot are limited to (1 V) and (2.5 V), respectively, and the THD of the output current is reduced to less than 5%. When utilizing a traditional PI controller, it is simply not possible to use thin film capacitors on the DC-Bus.

Can film capacitors reduce output current ripples and voltage fluctuations?

In this research, the main goal is to eliminate the output current ripples and voltage fluctuations associated with employing film capacitors. First, a modified incremental conductance (MIC) technique is proposed for tracking the maximum power by controlling the duty ratio of the DC-DC boost converter.

What is a PWM inverter?

The AC-driven (PWM) inverters are power converters that convert DC-Bus voltage to AC voltage. The PWM inverter's DC-Bus capacitor functions as an energy barrier to stabilize and keep the DC-Bus voltage at a relatively constant level. Therefore, the large capacitance of the electrolytic capacitors is often used as DC-Bus capacitors.
