

# Requirements and standards for the purchase of photovoltaic brackets

What are the standards for photovoltaics?

There are numerous national and international bodies that set standards for photovoltaics. There are standards for nearly every stage of the PV life cycle, including materials and processes used in the production of PV panels, testing methodologies, performance standards, and design and installation guidelines.

What are the installation requirements for a PV array?

Installation requirements are also critically dependent on compliance with the IEC 60364 series (see Clause 4). PV arrays of less than 100 W and less than 35 V DC open circuit voltage at STC are not covered by this document. PV arrays in grid connected systems connected to medium or high voltage systems are not covered in this document.

What should be included in a PV mounting system?

PV mounting systems and devices: Devices and systems used for mounting PV modules that are also used to provide grounding of the module frames should be identified for the purpose of grounding solar panels. Adjacent modules: Devices identified and listed for bonding the metal frames of PV modules can bond one panel to an adjacent one.

Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.

What are the regulatory levels for photovoltaic systems?

At least three regulatory levels for the production, installation, operation and end of life of photovoltaic systems can be considered. Additionally, the Life Cycle Assessment methodology is also regulated by standards. In this chapter, the three levels are presented.

What are the requirements for regulating PV system design and battery function?

First, to regulate system design and battery function: IEC 62124 for stand-alone PV system design recommendations and PV performance evaluation (including battery testing and recovery after periods of low state-of-charge) in a variety of climatic conditions, and IEC 62509 for battery charge controllers.
