

Can I install solar panels myself?

You can install solar panels yourself, but doing it alone involves risks. Going solar has significant financial benefits: it reduces your monthly electricity costs and can even increase the value of your home. Incentives can lower your overall cost drastically, but solar is still a big investment.

How do I choose a solar installer?

Choose a solar installer. An installer can help you determine whether your roof is suitable for solar panels. Begin by researching qualified, insured installers online or asking for recommendations from people who've gone solar. Comparison-shop by asking multiple installers to come assess your roof.

Can solar panels be installed on a roof?

To get the most out of your system, ensure your home can accommodate solar panels before installing them on your roof. Your roof's shading, its orientation and angle towards the sun, and its age all contribute to its potential to generate solar energy. In a perfect world, your panels will face south and tilt between 15 and 40 degrees.

Can solar panels be installed on a south-facing roof?

For the best results, solar panels should be installed on a south-facing roof with minimal to no shading. Solar panels can be installed facing other directions, but they won't generate as much electricity, so you'd have to install more, which would jack up the price. You also want to install solar panels on a roof that is in good condition.

How do I determine my home's solar rooftop potential?

Determine your home's solar potential. Aside from your roof's condition, your home's solar rooftop potential depends on your geographic location, the position of your home in relation to the sun, how much shade you have, and the PV system you and your installer choose.

Should I add a solar energy system to my roof?

You may be considering the option of adding a solar energy system to your home's roof or finding another way to harness the sun's energy. While there's no one-size-fits-all solar solution, here are some resources that can help you figure out what's best for you. Consider these questions before you go solar. See the Spanish version [here](#).

Tesla uses solar panels that offer a sleek and modern take on traditional panels. With our proprietary mounting hardware, panels can be installed close to your roof without the need for rails, so they blend in with your roofline. Durable and ...
