

Can IoT-based smart microgrid work in rural areas?

This research paper has proposed an IoT-based smart microgrid system for rural areas with an advanced control system for the optimal microgrid operation using the internet. The solution is provided by thinking a group of people living in a remote area.

Can We design microgrids in rural communities?

A vast majority of the energy access programs currently underway are in developing countries with limited access to the latest information and state-of-the-art technology. This paper serves as a link between scientific advancements and field-proven best-practices for designing microgrids in rural communities.

Is a standalone microgrid a viable option for rural communities in Uttarakhand?

In the present work, a standalone microgrid is planned to integrate solar, wind turbine, diesel generator, and battery for the rural community of the hilly state of Uttarakhand (India). The Feasibility and techno-economic analysis of a proposed microgrid is conducted.

How to design a microgrid system?

For the modeling of a microgrid system, a lead-acid battery is used. Diesel generators are extremely useful in designing microgrid systems. It provides the power when demand cannot meet by the battery and renewable energy resources. 6. Optimization algorithm Renewable energy optimization problems widely used bio-inspired optimization methods.

Can a microgrid be used to electrify urban communities?

In suggested, microgrids using solar PV systems for the electrification of urban communities, reducing dependency on grid supply and low carbon emission. Local sources of renewable power generation are combined to form an energy model that can provide the energy solution to the region and work in on-grid and off-grid modes.
