How to design a solar generator?

The first step in designing the solar generator is estimating your energy needs. To estimate the energy consumption for the desired devices, we can use the formula: Energy (in watt-hours) = Power (in watts) x Time (in hours) Let's calculate the energy consumption for each device: 6W LED for 6 hours: Energy = 6W x 6h = 36 Wh

How to generate electricity from a vertical wind turbine?

Use LED light and sound board, attach the wire to the alligator clips and put a box fan in front of the vertical wind turbine. With the wind energy, the electricity will be supplied. This is small wind power turbine by 1.eere.energy.gov which can generate a good amount of electricity.

What size inverter does a DIY solar generator use?
