

Can photovoltaic panels be placed on a slope of a road?

Layout of photovoltaic panels on the south-facing slope of the road. Similarly, the optimal tilt angles of PV arrays on the slopes of roads in typical directions could be simulated and derived using PVsyst7.2, and they are shown in Table 2. However, the desirable PV array placement may not always be in the same orientation as the target slope.

Does slope orientation affect PV power generation potential?

The PV power generation potential of a slope is significantly impacted by the type and orientation of the subgrade. Therefore, the slope orientation calculation method of the three kinds of subgrade was investigated to facilitate the potential assessment. Figure 3.

How to optimize a photovoltaic plant?

The optimization process is considered to maximize the amount of energy absorbed by the photovoltaic plant using a packing algorithm (in Mathematica(TM) software). This packing algorithm calculates the shading between photovoltaic modules. This methodology can be applied to any photovoltaic plant.

What is the placement scheme of PV array on Highway slopes?

The Placement Scheme of PV Array on Highway Slopes Within the available highway slope area, the orientation and tilt angle of the PV array placement have crucial impacts on the power generation potential. Additionally, the divided highway segments generally run in different directions, which results in various slope orientations.

Does a ground-mounted photovoltaic power plant have a fixed tilt angle?

A ground-mounted photovoltaic power plant comprises a large number of components such as: photovoltaic modules, mounting systems, inverters, power transformer. Therefore its optimization may have different approaches. In this paper, the mounting system with a fixed tilt angle has been studied.

How to determine the optimal PV array placement schemes for slope orientations?

Highway segmentation and geometric parameter calculation methods were established, and the optimal PV array placement schemes for typical slope orientations were determined by simulating the PV power generation in the software PVsyst (version 7.2).

To facilitate the large-scale utilization of solar energy on highway slopes, it is necessary to provide practical calculation and assessment methods for the power generation potential in order to support the PV power generation ...
