

What are the main features of solar photovoltaic (PV) generation?

Abstract: This chapter presents the important features of solar photovoltaic (PV) generation and an overview of electrical storage technologies. The basic unit of a solar PV generation system is a solar cell, which is a P-N junction diode. The power electronic converters used in solar systems are usually DC-DC converters and DC-AC converters.

What are the applications of solar PV based water pumping?

The irrigation, drinking and industrial water supply, and fountains are recently focused applications of solar PV based water pumping. Water pumping has been an attention-grabbing application of solar PV energy since last two decades. The brushless DC (BLDC) motor, being an energy efficient motor, suits the said application of solar PV energy.

What are PV fed motor drive based applications?

PV fed motor drive based applications in a domestic, agricultural and industrial level increased. This work focus classification and control techniques of drive based on types of conversion stages.

Can BLDC motor-driven solar photovoltaic (PV) fed water pump be sensorless?

This study deals with a position sensorless brushless DC (BLDC) motor-driven solar photovoltaic (PV) fed water pump. A technique based on the back electromotive force (back-EMF) zero crossing is proposed for sensorless operation of the BLDC motor. The back-EMF is derived from the difference of line voltages.

Is solar PV a competitive source of new power generation capacity?

Solar PV is emerging as one of the most competitive sources of new power generation capacity after a decade of dramatic cost declines. A decline of 74% in total installed costs was observed between 2010 and 2018 (Figure 10).

Can PV panels supply DC power to AC motor?

DC power obtained from PV panels can directly supply to DC motor or it can be converted to alternating current (AC) using an inverter to drive AC motor. Fig. 1 shows four possible ways of power transfer from PV to either DC or AC drive applications and are described as followed as:

This study deals with a position sensorless brushless DC (BLDC) motor-driven solar photovoltaic (PV) fed water pump. A technique based on the back electromotive force (back-EMF) zero crossing is proposed for ...

A photovoltaic (PV) system is composed of one or more solar panels combined with an inverter and other electrical and mechanical hardware that use energy from the Sun to generate electricity. PV systems can vary greatly in size from ...

The test results show that the average electric power generated by solar cells with dual axis solar tracking is around 1.3 times greater than that of non-solar tracking solar ...

Lastly, presented a two-stage control strategy for a solar photovoltaic (PV) system coupled with a brushless DC motor through a DC-to-DC zeta converter. In the quest to optimize power extraction from the PV system ...

Obviously, dual-axis tracker systems show the best results. In [2], solar resources were analysed for all types of tracking systems at 39 sites in the northern hemisphere covering ...

The generation of PV power has demonstrated a noteworthy potential in satisfying the demand for energy. Up to the year 2016, the worldwide operation of the sun-oriented power generation capacity has ascended to 302 ...

The solar water pump could be either a dc powered pump (Figure 2) or an ac power pump (Figure 3). Figure 2: DC powered pump Figure 3: AC powered pump The "pump controller" in the dc ...

This article presents a brushless DC motor drive using a solar photovoltaic (PV) array and grid. Solar PV array-fed drive systems typically need a DC-DC converter stage in ...

This paper presents an experimental platform for regulating the DC motor angular speed powered by photovoltaic cells. The experimental platform comprises an Eco Green Energy EGE-260P-60 solar panel, DC/DC ...

The solar cell voltage production is very low which is not sufficient energy for the industrial automotive systems. So, the cells are designed by selecting different categories of ...

This study deals with the use of a Landsman converter for maximum power point tracking in solar photovoltaic (SPV) array-based water pump driven by a permanent magnet brushless DC (BLDC) motor. ... Thus, ...
