

Do state-owned PV Enterprises have a strategic priority?

Since state-owned PV enterprises have a greater need to serve government objectives to secure legitimacy, the government should also emphasize the strategic priority of innovation rather than production explosion to stimulate the R&D efforts of state-owned PV enterprises.

Do government photovoltaic subsidies affect enterprise independent innovation in China?

Achieving a green, low-carbon economy necessitates clarifying the impacts of government photovoltaic (PV) subsidies on enterprise independent innovation in China. This study constructs a tripartite evolutionary game model among government, enterprises, and energy regulatory service centers (ERSC).

Do government subsidies promote Enterprise Innovation in the PV industry?

The purpose of this research is to explore the impacts of government subsidies on promoting enterprise innovation in the PV industry in pursuit of renewable energy goals. Theoretical analysis shows that government subsidies play an essential role in promoting enterprises' innovation.

Are state-owned PV Enterprises more risky?

In China, since state-owned PV enterprises have a greater need to serve government objectives to secure legitimacy, PV enterprises with a higher proportion of state-owned shares are usually less likely to conduct risky innovation activities than private ones.

Where is the photovoltaic (PV) market developing?

Figure 7. The photovoltaic (PV) market development in China, Germany, Japan and the USA from 1990 to 2017 (Data source: IEA. PVPS. National Survey Report of PV Power Applications). By the end of 2009, the cumulative PV installed capacity in China was only 300 MW.

What is the difference between a PV enterprise and a profit?

enterprises. Here, PV enterprises' fixed capital is used to denote the size of PV enterprise. In China, managers in state-owned PV enterprises are more reluctant to carry out innovation activities. Profit refers to the market profit. Market profit can create enterprises. With sufficient innovation efforts, PV profits in the market.

growth in U.S. renewable energy technologies. The number of distributed solar photovoltaic (PV) installations, in particular, is growing rapidly. As distributed PV and other renewable energy ...

All kinds of solar PV power generation projects, including the state-owned power groups and large PV enterprises that undertake centralized PV power plant and PV plants, as ...

Vietnam's electricity sector is dominated by large state-owned enterprises. EVN controls about two-thirds of

the electricity generation capacity in the country, with the remainder operated by ...

The authorities' multidimensional approach towards photovoltaics and the stimulative market forces resulted in the increasing role of solar power in the Chinese power generation mix.

4.2. Stage 2: Empirical results of the SFA model. It is proposed that, to minimize the influence of environmental variables on the innovation efficacy of corporates, this essay ...

This research investigates the impacts of R& D subsidies and non-R& D subsidies on the innovation in PV enterprises. With samples of Chinese listed PV enterprises from 2010 to ...

China is a world leader in the global solar photovoltaic industry, and has rapidly expanded its distributed solar photovoltaic (DSPV) power in recent years. However, China's DSPV power is still in its infancy. As such, its ...

Solar Photovoltaic Power Generation State-Owned Enterprise
