

Can a molecular thermal power generation system store and transfer solar power?

The generator can produce, as a proof of concept, a power output of up to 0.1 nW (power output per unit volume up to  $1.3 \text{ W m}^{-3}$ ). Our results demonstrate that such a molecular thermal power generation system has a high potential to store and transfer solar power into electricity and is thus potentially independent of geographical restrictions.

Who is Zhifeng Wang?

Zhifeng Wang, Professor of Institute of Electrical Engineering of Chinese Academy of Sciences (IEE-CAS). Research Fields: Concentrating solar thermal power technology (CSP), Solar integrated building technology. Zhifeng Wang is a professor of Institute of Electrical Engineering of Chinese Academy of Sciences (IEE-CAS).

Can a flat-panel solar thermal to electric power conversion work?

Here we demonstrate a promising flat-panel solar thermal to electric power conversion technology based on the Seebeck effect and high thermal concentration, thus enabling wider applications. The developed solar thermoelectric generators (STEGs) achieved a peak efficiency of 4.6% under AM1.5G ( $1 \text{ kW m}^{-2}$ ) conditions.

Should a thermal management system be included in the next generation?

The next generation of combined devices should include a better thermal management system to avoid heat dissipation from the MOST system to the surrounding environment, thereby increasing the amount of heat energy converted to electrical power output.

Does strategic positioning of solar thermal power generation promote technological progress?

Strategic positioning of solar thermal power generation to promote technological progress. Huadian Technology. DOI:10.3969/j.issn.1674-1951.2021.

Can solution-based thermal management and TE materials increase power output?

This demonstrates that, with the MOST materials at hand, better thermal management and TE materials may increase the power output of the next generation of devices. To the best of our knowledge, these results show the first proof of principle that solution-based MOST and PCM-MOST systems can generate electric power.
