

Solar home power station payback

What is a solar panel payback period?

“Solar panel payback period” is the amount of time it'll take you to completely pay off your solar power system through savings on your electric bill. It is calculated by taking the total cost to install the system, then subtracting solar incentives and/or rebates, and monthly electric bill savings until the total cost has been paid off.

How long does it take for solar panels to pay back?

The amount of time it takes for the energy savings to exceed the cost of installing solar panels is known as the payback period or break-even period. A typical payback period for residential solar is 7-10 years, although it varies depending on your utility rates, incentives, system size, and other factors.

What happens if I reach my solar payback period?

Your savings can go towards paying off your system, and once you reach your payback period, those savings will go straight into your pocket for the full lifetime of the system! What factors impact your solar payback period?

How do I calculate my solar payback period?

Your electricity use and cost, the cost of solar, and your access to solar incentives all impact your solar payback period. To calculate your solar payback period, you simply divide the cost of installing your system by the amount of money you'll save each year.

How much do solar panels save a year?

\$1,200 Savings Per Year (Total savings per year if your solar panels reduce your energy bill by \$100 each month) $\$12,000 \text{ Investment} / \$1,200 \text{ Savings Per Year} = 10 \text{ Year Solar Payback Period}$ This calculation assumes that your electricity rates don't go up. If they do, your savings are also going to increase, and your payback period will be shorter.

How much does a solar installation cost?

For example, let's assume your solar installation costs \$20,948 after incentives (the average cost on EnergySage). If you spend about \$2,800 annually, or \$233 monthly, on electricity, you'll break even on your solar investment in 7.5 years ($\$20,948 / \$2,800 = 7.5$).

Adequate solar panel planning always starts with solar calculations. Solar power calculators can be quite confusing. That's why we simplified them and created an all-in-one solar panel ...

Start with the total cost to install solar on your home. (Be sure to consider interest and fees if you're taking out a loan.) Then, subtract the value of any rebates, incentives or tax credits.

Solar home power station payback
