How do I install a solar panel using screw piles?

Before installing your solar panel using screw piles, contact one of our certified installers so that they can determine the type, amount, and location of the helical (screw) piles to be installed. Depending on your project, they will be able to estimate the costs. Rapid installation Minimal impact to the landscape No excavation

What is a solar pile & foundation?

At Exactus Energy, we specialize in providing thorough solar pile and foundation designs to set you up for success through installation and beyond. Solar pile structures are foundational components supporting solar panel arrays, often composed of durable materials like steel or aluminum.

What are the best helical piles for solar panel Foundations?

Helical Anchors offer the best helical piles for solar panel foundations. Solar foundation systems are important to support the solar panel and protect its foundation from any kind of damage. The Helical Pile System is the most reliable and durable solution for solar panel foundations.

What is a helical pile for solar panels?

Helical piles have emerged as the most commonly used foundation system for the solar panels. Helical Anchors offers various terminations that are capable of adapting to any sort of solar array connection and structure. Helical piles also have the ability to withstand compressive, tensile and lateral forces which makes them more versatile to use.

Are helical piles a good choice for solar array anchoring?

Depending on ground conditions, helical piles can often be shorter in length and therefore cost less in installation time and energy consumption than comparable driven piles or drilled shafts. Some manufacturers of helical piles for solar array anchoring assert installation rates as high as 500 piles per day.

How do I choose a pile for a solar farm?

The load-bearing capacity needed for the solar farm is another critical factor in selecting the type of pile. Projects requiring high load capacities--such as those with large, heavy solar panels or in regions with significant wind forces--may necessitate the use of concrete or composite piles.
