

Solar potential power generation

What is solar energy potential?

Global map showing practical solar energy potential after excluding for physical, environmental and other factors. The potential for clean, carbon-free electricity generation from solar photovoltaic (PV) sources in most countries dwarfs their current electricity demand.

What is the theoretical potential for PV power generation?

Theoretical potential for PV power generation is best characterized by the long-term distribution of solar resource, in other words, the 'amount of fuel' available for PV electricity generation at a given location.

Is solar energy a future energy resource?

The utilization of renewable energy as a future energy resource is drawing significant attention worldwide. The contribution of solar energy (including concentrating solar power (CSP) and solar photovoltaic (PV) power) to global electricity production, as one form of renewable energy sources, is generally still low, at 3.6%.

What is the potential of solar power generation in China?

Chen et al. developed a comprehensive solar resource assessment system based on the GIS +MCDM method in 2019. This system was applied to the assessment of the potential of PV power generation in the countries under the "Belt and Road" initiative. The results showed that the PV potential of China is 100.8 PWh.

What is a theoretical solar PV potential?

The long-term energy content of the solar resource available at a certain location defines the theoretical solar PV potential (Chapter 2.3). For PV technology, the energy content is well quantified by the physical variable of global horizontal irradiation (GHI).

What is the contribution of solar energy to global electricity production?

While the contribution of solar energy to global electricity production remains generally low at 3.6%, it has firmly established itself among other renewable energy technologies, comprising nearly 31% of the total installed renewable energy capacity in 2022 (IRENA, 2023).

Globally, solar projects are being rapidly built or planned, particularly in high solar potential regions with high energy demand. However, their energy generation potential is ...
