

Can solar EV cities provide affordable electricity to urban dwellers?

Here, we propose a 'SolarEV City' concept, in which integrated systems of cities' roof-top photovoltaics and electric vehicles (EVs) supply affordable and dispatchable CO₂-free electricity to urban dwellers. Our analyses indicate that implementations of the concept can meet 53%-95% of electricity demands in nine major Japanese urban areas by 2030.

Can solar power be integrated into urban energy grids?

Smart grid technologies facilitate the integration of solar power into urban energy grids (Karduri et al., 2023). By reducing transmission losses, and enhance the overall reliability and resilience of urban energy systems.

How can solar energy revolutionize the transportation sector in smart cities?
