

How do I use the Global Solar Atlas?

Welcome to the Global Solar Atlas. Start exploring solar potential by clicking on the map. Select sites, draw rectangles or polygons by clicking the respective map controls. Calculate energy production for selected sites. The Global Solar Atlas provides a summary of solar power potential and solar resources globally.

What is ESMAP's Global Solar Atlas?

Responding to client's needs, ESMAP and its partners have created a free, web-based tool--the Global Solar Atlas--that can help identify potential sites for solar power generation virtually anywhere in the world.

How accurate is the Global Solar Atlas?

While the data powering the Global Solar Atlas is the most recent and most accurate currently available, it is not fully validated in many developing countries due to the lack of ground-based measurement data from high precision solar radiation sensors.

What statistics describe the country solar power potential?

Other statistics (minima, maxima, percentiles) describe the country solar power potential in better detail. Distribution of a photovoltaic power output histogram communicates how much land in the country is available in practical potential Levels 0, 1, and 2, and various PVOUT ranges.

How many solar installations will there be in 2020?

These trends are set to continue with new global solar installations of over 140 GW expected in calendar year 2020. The reason for this is straightforward. Solar radiation is essentially a free resource available anywhere on Earth, to a greater or lesser extent.

What is a solar power tool & how does it work?

The tool displays annual average solar power potential, and has the capacity to zoom into areas in great detail (with a spatial resolution of 1 km, or 0.6 of a mile).

In 2017, compared with thermal power generation in China, photovoltaic power generation systems were used in areas where the solar radiation is effective for 1000 h-3000 ...

The Global Solar Atlas provides a summary of solar power potential and solar resources globally. It is provided by the World Bank Group as a free service to governments, developers and the general public, and allows users to quickly ...

Solar thermal power generation is already very well-known and getting popular in recent years while other potential applications of the concentrated heat from solar radiation are ...

Solar power generation design atlas

This free, web-based tool will help investors and policymakers identify potential sites for solar power generation virtually anywhere in the world, at the click of a button. The tool displays annual average solar power ...

A new report provides data on the solar PV power potential for countries and regions. The potential for electricity generation from solar photovoltaic sources in most countries dwarfs their current electricity demand.

Access our tools to explore solar geospatial data for the contiguous United States and several international regions and countries. Solar Resource Maps and Data Find and download resource map images and data for North America, the ...

The report is based on data provided by the World Bank through the Global Solar Atlas, a free, web-based tool providing the latest data on solar resource potential globally. It is accompanied by country factsheets, downloadable from the ...

Researchers in Jordan and Qatar have come up with a remarkable design for a “twin technology solar system” capable of generating clean energy 24/7. This double-action ...

Solar thermal power generation is already very well-known and getting popular in recent years while other potential applications of the concentrated heat from solar radiation are little explored.

OverviewBackgroundMethods and dataFeaturesUsageSee alsoExternal linksThe Global Solar Atlas (GSA) is a free, online, map-based application that provides information on solar resource and photovoltaic power potential globally. It features the online interactive map tools, simplified photovoltaic (PV) power calculator, reporting tools and the extensive download section. It is intended to provide policy makers, academia, and renewable energy stakeholders to rais...
