

Solar power generation is free in Sidu

Is a solar energy storage power generation system based on Isru?

A solar energy storage power generation system based on ISRU is established and analyzed. The linear Fresnel collector and lunar regolith thermal energy reservoir (TER) coupling with Stirling power generator are designed. The conversion performance analysis of the solar Stirling power generation system is carried out.

What is a solar energy storage power generation system?

A solar energy storage power generation system based on in-situ resource utilization (ISRU) is established and analyzed. An efficient linear Fresnel collector is configured for solar concentration. The thermal energy reservoir (TER) coupling with Stirling power generator is designed using the fuel tanks of descent module and lunar regolith.

Can solar power be harvested in situ?

There is great interest in harvesting solar power using locally leveraged in situ resources as an essential facet of in situ infrastructure. Traditionally, silicon-based photovoltaic cells have been assumed, preferably manufactured in situ using a 3D printing rover, but there are major difficulties with such scenarios.

What is in-situ solar power generation in space?

In-situ thermoelectric conversion deviceSolar power generation in space includes two forms: photovoltaic power generation and closed thermal engine power generation.

How to calculate solar thermal storage power generation efficiency?

The total efficiency is of the whole solar thermal storage power generation system is 19.6%,which is calculated by $\eta = \frac{P_{\text{average}}}{P_{\text{lunar}}} \times \frac{t_{\text{c}}}{T_{\text{lunar}}}$ where the lunar circadian cycle T_{lunar} is 350h,generation efficiency η is 0.95. Why is solar energy an in-situ resource?

In addition,the lunar daylight lasts for about 14 Earth days,providing continuous light. Thus,solar energy is an in-situ resource with abundant reserves on the Moon's surface. These features are all favorable factors for in-situ utilization of solar energy as the main energy source on the Moon's surface.
