Can nuclear power plants produce clean electricity?

The recent decade has seen unprecedented development of renewable energy, particularly solar and wind energy. Once installed, power plants based on these sources provide electricity without producing any carbon dioxide emissions. Similarly to them, nuclear power plants are also capable of generating clean electricity.

What is hybrid nuclear-solar power plant?

The hybrid nuclear-solar power plant is compared with standalone solar tower plant. For comparison purposes, both plants generate the same amount of solar electricity. Both configurations have identical solar islands regarding structure and parameters as described in Section 2.3.

How do nuclear power plants produce electricity?

Nuclear power plants generate electricity via fission reactions, where atoms split apart, releasing energy as heat and radiation. Neutrons released during these splits collide with other atoms and split them, creating a chain reaction. In nuclear power plants today, there are basically two absolutely essential pieces.

What is hybrid nuclear-solar tower power plant (NSPP)?

2.3. Configuration of hybrid nuclear-solar tower power plant (NSPP) The proposed hybrid plant consists of four main parts: solar field, thermal storage, NuScale SMR and power block. Fig. 4 shows the assumed hybrid plant configuration.

Can a small nuclear reactor plant be hybridized with solar power?

The proposed hybridization of small nuclear reactor plant with concentrated solar power provides an additional side benefit. Solar heat contribution is utilized quite efficiently. Even though solar heat to nuclear heat input ratio is 53.35%, solar power to nuclear power output ratio reaches 109%.

What is the difference between solar and nuclear power?

Costs: The initial investment in nuclear power is extremely high, while solar costs have decreased, making it more accessible for small and large-scale projects. Solar also offers the advantage of energy decentralization, allowing individuals to generate their own electricity.
