

Solar power generation operation and maintenance services

Who provides post-installation solar services?

Solar, Inc., which provides post-installation solar services focusing on operations and maintenance of existing photovoltaic (PV) arrays.

What is operation & maintenance?

Operation & Maintenance (O&M) is one of the most critical ways to ensure that the solar power system gives the best possible generation. At CleanMax, we work to maintain the plant infrastructure and equipment, with the goal of improving the equipment's life by preventing excess depreciation and impairment.

What does CleanMax do when a solar plant is installed?

As a solar plant is installed, engineers at CleanMax prepare a schedule for preventive maintenance. This includes, but is not limited to, adjustments, cleaning, lubrication, repairs, replacements, and the extension of equipment life. At least twice a year, O&M personnel conduct a general inspection of the installation-site.

What is solar O&M & why is it important?

Conducting regular O&M ensures optimal performance of photovoltaic (PV) systems while minimizing the risks of soiling, micro-cracking, internal corrosion, and other problems. Below, you will find several resources that help establish O&M practices. How do I find best practices for solar O&M?

Why is PV system operations a growing field?

PV system operations is a growing field because increasing PV penetration into the larger utility system, and an emerging market for ancillary services (e.g., dispatch of storage, sourcing reactive power, curtailment of output) require more system interaction on an ongoing basis.

How to monitor a solar power plant?

Remote monitoring: A solar power plant constantly needs to be monitored to detect breakdowns and optimise its operation. The same function could be performed either on-site or remotely wherein we retrieve all the data either from the inverter or from communicating equipment (probes, meters etc.).

The primary determinant of the operation and maintenance efficacy of a solar power plant is the apparatus configuration and choice. The implementation of critical equipment such as high ...
