Are soapstone & granite rocks the next generation of solar energy collectors?

Experimental Investigation of Soapstone and Granite Rocks as Energy-Storage Materials for Concentrated Solar Power Generation and Solar Drying Technology. ACS Omega, 2023; 8 (21): 18554 DOI: 10.1021/acsomega.3c00314 American Chemical Society. "The next generation of solar energy collectors could be rocks." ScienceDaily.

Can soapstone & granite be used to store solar energy?

A team has found that certain soapstone and granite samples from Tanzania are well suited for storing this solar heat, featuring high energy densities and stability even at high temperatures. The next generation of sustainable energy technology might be built from some low-tech materials: rocks and the sun.

Can solar energy be stored in rocks?

Sandia designed a small 100 kWh test project at its National Solar Thermal Test Facility. PV panels are installed at the site, which is being tested for its ability to store intermittent generation. "One of the advantages of thermal energy storage in rocks is that it can be built anywhere," said Walter Gerstle, co-founder of CSolPower.

Can craton soapstone be used for energy storage?

The team found that the Craton soapstone performed best as a thermal energy storage rock. It absorbed, stored and transmitted heat effectively while staying stable and strong. This makes it ideal for electricity storage applications. The other rocks could be used for a lower-energy application, such as a solar food dryer.

Is soapstone a thermal energy storage resource?

Granites are the most abundant rocks in the continental crust. Soapstone, meanwhile, has been used since ancient times to make cooking pots and the internal linings of stoves, but no one has studied its potential for thermal energy storage. The researchers collected several rock samples from the Craton and Usagaran belts for analysis.

How molten salts are used in solar power plants?

Most of the operational plants have integrated a storage unit using molten salts as the storage media, one uses combined steam/oil (Dahan Power Plant), another just steam (Khi Solar One) and one a ceramic heat sink (Jülich Solar Tower).

Researchers from the Nelson Mandela African Institution of Science and Technology in northern Tanzania recently explored the potential viability of using soapstone and granite as thermal energy storage materials to
