What is solar energy?

Solar energy is energy from the sun that we capture with various technologies, including solar panels. There are two main types of solar energy: photovoltaic and thermal. The "photovoltaic effect" is the mechanism by which solar panels harness the sun's energy to generate electricity. Want to take advantage of solar energy yourself?

How is solar power generated?

Solar power is generated in two main ways: Solar photovoltaic (PV) uses electronic devices, also called solar cells, to convert sunlight directly into electricity. It is one of the fastest-growing renewable energy technologies and is playing an increasingly important role in the global energy transformation.

What is solar power & how does it work?

Solar power, also known as solar electricity, is the conversion of energy from sunlight into electricity, either directly using photovoltaics (PV) or indirectly using concentrated solar power. Solar panels use the photovoltaic effect to convert light into an electric current.

How is solar energy converted to electricity?

Energy from sunlight or other renewable energy is converted to potential energy for storage in devices such as electric batteries or higher-elevation water reservoirs. The stored potential energy is later converted to electricity that is added to the power grid, even when the original energy source is not available.

What are the different types of solar energy?

There are two main types of solar energy: photovoltaic and thermal. The "photovoltaic effect" is the mechanism by which solar panels harness the sun's energy to generate electricity. How efficient is a solar PV system?

Experimental PV cells and PV cells for niche markets, such as space satellites, have achieved nearly 50% efficiency. When the sun is shining, PV systems can generate electricity to directly power devices such as water pumps or supply electric power grids.

A solar panel that offers a power output of close to 100 W might take nine hours (or more) to charge even just mid-sized solar generator batteries. That can be a huge bottleneck, especially if you are depending on ...

The size of the solar generator to use depends on your needs. Commercial applications need a large size, while residential applications can do with either. For instance, if you want a generator to power the whole home, ...
