What is a power plant simulator?

A power plant simulator is a full-scale replica of the control room in the Olkiluoto 3 power plant, which can replicate exactly the functions of the new unit. It will mainly be used for operator training before the power plant unit is started up, and subsequently for annual supplementary training.

How to design a solar energy production simulation project?

Each idea needs different tools and performance factors. For instance, Matlab, Simulink, PSpice are a few of the tools. Likely, each idea in this field has different algorithms and metrics used in Solar Energy Production Simulation Projects. To design a solar system, one must have enough visions in all of them.
