How do I build my own Solar System?

One very important step when constructing your own solar setup is putting together a solar panel wiring diagram (or schematic). This will essentially serve as your map as you connect all of your components. Schematics is one of the more technical parts of DIY solar, but it doesn't have to feel like rocket science.

Can a PV system be installed on a roof?

Nevertheless, it is possible to install PV modules on all roof types. If the roof will need replacing within 5 to 10 years, it should be replaced at the time the PV system is installed to avoid the cost of removing and reinstalling the PV system.

Can Shadows affect solar power output?

Even small shadows, such as the shadow of a single branch of a leafless tree can significantly reduce the power output of a solar module. 1 Shading from the building itself - due to vents, attic fans, skylights, gables or overhangs - must also be avoided.
