What is the first solid-state battery for home energy storage?

From pv magazine USA Amptricity has announced what it says is the first solid-state battery for home energy storage. The company plans to deliver its first solid-state energy storage systems of up to 4 GWh or up to 400,000 homes within the next 30 months.

How many homes can a solid-state energy storage system deliver?

The company plans to deliver its first solid-state energy storage systems of up to 4 GWh or up to 400,000 homes within the next 30 months. Commercial 1 MWh demo units are available now to select customers, with an announcement coming in the next few weeks on full commercial production.

What are energy storage systems based on?

Nowadays, the energy storage systems based on lithium-ion batteries, fuel cells (FCs) and super capacitors (SCs) are playing a key role in several applications such as power generation, electric vehicles, computers, house-hold, wireless charging and industrial drives systems.

Can you store energy if you have a solar PV?

With Amptricity's solid state technology, homeowners can store energy for backup power--whether they have solar PVs or not," said Damir Perge, CEO and co-founder of Amptricity. Residential energy storage systems of 12 kWh to 48 kWh and commercial systems from 60 kWh to 80 kWh are available for preorder on Amptricity's website.

Are home energy storage systems safe?

The company says its home energy storage systems create greater safety and longevity, while the average residential systems use lithium-ion batteries, which pose a fire risk. Furthermore, its battery lifespan is three times longer than current lithium-ion technologies, the company reports.

Where can I buy energy storage systems?

Residential energy storage systems of 12 kWh to 48 kWh and commercial systems from 60 kWh to 80 kWh are available for preorder on Amptricity's website.
