Is concentrating solar power the future of electricity generation?

(Getty Images: John Moore) There was a time, not long ago, when the future of electricity generation looked something like the opening scene of Blade Runner 2049, with endless arrays of mirrors in concentric circles. Concentrated solar power (CSP) uses mirrors to focus heat from the Sun to drive a steam turbine and generate electricity.

Can solar power power a steam turbine?

The plant will use solar heat instead of coal to convert water to high-pressure steam, which is used to rotate turbines and generate electricity. To achieve that, power company China Three Gorges Corporation claims to have combined two adjacent heat-absorbing towers sharing a steam turbine generator.

Can concentrating solar thermal power produce steam for a brewery?

The Department of Energy is investing \$33 million into nine projects, including an effort to use "concentrating solar thermal" tech to produce steam for a brewery. The Ivanpah concentrating solar thermal plant, located in Mojave Desert. Ethan Miller/Getty Images

Can solar thermal produce hydrogen?

Researchers at West Virginia University, who are working with NASA, secured \$5 million to explore the use of solar thermal to produce a clean form of hydrogen, a fuel as well as a feedstock in the production of fertilizer, steel, and other industrial goods.
