What is a solar thermal power plant?

Since steam turbines can only be operated economically above a certain minimum size, today's solar thermal power plants have rated outputs in the range of 50 to 200 megawatts. The main difference to a conventional steam power plant is the solar field, which supplies the heat for the steam generator.

Are solar thermal power plants controllable?

Since power generation can be flexibly adapted to demand, solar thermal power plants are referred to as controllable power plants. Solar thermal power plants have an additional advantage. If there is little solar radiation for several days due to the weather, they can be operated in hybrid mode.

How do solar thermal power plants work?

Solar thermal power plants therefore rely on the storage of the intermediate product heat and not the end product electricity. Electricity is generated by means of a steam turbine cycle, which is operated according to demand and is supplied from the thermal storage system.

What are the location requirements for solar thermal power plants?

The location requirements for solar thermal power plants are comparatively low. Stony, rocky and gravel deserts with little vegetation are suitable, as are grasslands, scrublands and savannahs, for which there are practically no other economic uses, and which are available in almost unlimited quantities for this application in the Sun Belt.

Can solar thermal power be used to simulate a thermodynamic plant?

Remlaoui et al. (2019) used solar thermal power from a PTC to create a TRNSYS simulation for a thermodynamic plant firstly by using the sun as the main source for the power plant and secondly by using a conventional Rankine cycle using a combustion chamber as a heat source.

Why are solar thermal power plants important?

Since solar thermal power plants can feed their electricity into the power grid even after sunset, they are of particular value for an energy system based on renewable energy sources. Solar thermal power plants are of strategic importance in sunny countries to be able to phase out coal and gas power plants in the future.
