

Are double-junction solar cells a new era of ultra-high-efficiency photovoltaics?

Sophie X. An The recent tremendous progress in monolithic perovskite-based double-junction solar cells is just the start of a new era of ultra-high-efficiency multi-junction photovoltaics. We report on triple-junction perovskite-perovskite-silicon solar cells with a record power conversion efficiency of 24.4%.

Where is China's largest molten salt solar power plant located?

China's largest molten salt solar thermal power plant is situated in Dunhuang, northwest China's Gansu Province. By receiving sunlight and heating up the molten salt, it can constantly generate electricity. The power station generates 390 million kilowatts of electricity per year, reducing carbon dioxide emissions by 350,000 tonnes.

What is China's first large-scale solar thermal demonstration power station?

Wang L (2018a) China's first large-scale solar thermal demonstration power station officially put into operation. Power equipment management 25 (10):92 (in Chinese) Wang M (2018b) Spatial effect of environmental regulation on carbon emissions. Meteorol Environ Res 9 (01):57-61 Wang K (2020).

Does China have centralized photovoltaic power generation?

Zhang HY (2018) Economic research on centralized photovoltaic power generation in China. North China Electric Power University (Beijing), Dissertation (in Chinese) Zhang C, Su B, Zhou KL, Yang SL (2019) Decomposition analysis of China's CO<sub>2</sub> emissions (2000-2016) and scenario analysis of its carbon intensity targets in 2020 and 2030.

Is concentrated solar power making a comeback?

Concentrated solar power is an old technology making a comeback. Here's how it works The 100MW Cerro Dominador CSP plant in the Atacama Desert, Chile. (Getty Images: John Moore)

solar energy to electricity to power the evaporation process. The other one is utilizing the solar thermal energy directly as the driving energy for evaporation. The PV desalination system ...

The cost of electricity from this system would be less than 3 cents per kilowatt-hour, which would not only be the cheapest available option for new power generation but ...

We report on triple-junction perovskite-perovskite-silicon solar cells with a record power conversion efficiency of 24.4%. Optimizing the light management of each perovskite sub-cell (~1.84 and ~1.52 eV for top and ...

Concept of the Cu/CuO foam-based 2.5D solar-driven evaporator. a) Schematic illustration of the transformation of a 2D flat to a 2.5D oblique evaporator employed in ...

# Super Xiaojie Solar Power Generation

China's largest molten salt solar thermal power plant is situated in Dunhuang, northwest China's Gansu Province. By receiving sunlight and heating up the molten salt, it can constantly generate electricity. The power station ...

Thermal-power cycles operating with supercritical carbon dioxide (sCO<sub>2</sub>) could have a significant role in future power generation systems with applications including fossil ...

Due to the implementation of the "double carbon" strategy, renewable energy has received widespread attention and rapid development. As an important part of renewable energy, solar ...
