What are the components of microgrid control?

The microgrid control consists of: (a) micro source and load controllers, (b) microgrid system central controller, and (c) distribution management system. The function of microgrid control is of three sections: (a) the upstream network interface, (b) microgrid control, and (c) protection, local control.

Are hierarchical control strategies applied to microgrids?

This paper reviews the status of hierarchical control strategies applied to microgrids and discusses the future trends. This hierarchical control structure consists of primary, secondary, and tertiary levels, and is a versatile tool in managing stationary and dynamic performance of microgrids while incorporating economical aspects.

What is the nature of microgrid?

The nature of microgrid is random and intermittent compared to regular grid. Different microgrid structures with their comparative analyses are illustrated here. Different control schemes, basic control schemes like the centralized, decentralized, and distributed control, and multilevel control schemes like the hierarchical control are discussed.

Can hybrid microgrids be controlled?

Despite the merits of HMG, the coordination and control of hybrid microgrid are becoming a challenging issue. To solve these problems, in References 112, 116, 117, and 118, different control solutions are provided for HMG operation.

What are the different types of microgrid controllers?

One of the main types of controllers is robust controllers. Robust control is used to solve microgrid disturbances caused by internal or external factors and is very efficient to improve system stability. Robust control has challenges such as energy balance and stability.

What are microgrid control objectives?

The microgrid control objectives consist of: (a) independent active and reactive power control, (b) correction of voltage sag and system imbalances, and (c) fulfilling the grid's load dynamics requirements. In assuring proper operation, power systems require proper control strategies.
