

The cost of a wind turbine

How much does a wind turbine cost?

The typical wind turbine is 2-3 MW in power, so most turbines cost in the \$2-4 million dollar range. Operation and maintenance runs an additional \$42,000-\$48,000 per year according to research on wind turbine operational cost. See the National Renewable Energy Laboratory's website for the most recent (December 2022) Cost of Wind Energy Review.

How much does a wind farm cost?

The location of a wind farm can have a profound effect on cost. While a wind turbine in Europe or the United States can cost about \$1 million per MW, turbines installed in countries like Brazil can be as cheap as \$500,000 per MW. Once the turbines are erected, they must be wired to the electrical grid.

How much does a 12 MW wind turbine cost?

The most powerful 12 MW wind turbine costs up to \$400 million to manufacture and install. Costs for utility-scale wind turbines can be broken down into three categories: manufacturing, transport and installation, and operations and maintenance. Researchers are constantly working to drive down the costs.

How much does a wind turbine cost in 2021?

Wind turbine prices averaged \$800-\$950 per kilowatt (kW) in 2021. The average installed cost of wind projects in 2021 was \$1,500/kW, down more than 40% since the peak in 2010. Lower installation costs lead to energy produced at a lower cost, with the average levelized cost of energy for utility-scale wind power down to \$32/MW-hours in 2021.

Why are wind turbines so expensive?

The values are based on typical wind turbines in use today. On the other hand, newer wind turbine technologies, such as carbon fiber, are more expensive. Engineering designs that eliminate the need for certain turbine components -- such as a transition piece -- tend to drive down costs.

What are the costs of a wind project?

Wind projects' costs include expenses other than turbines, like wind resource assessment and site analysis; construction; permitting and interconnection studies; utility system upgradation, transformers, protection and metering of the equipment; insurance; operations, warranty, maintenance, and repair; and legal and consultation fees.

Lower wind turbine pricing has pushed down installed project costs over the last decade. Wind turbine prices averaged \$800-\$950 per kilowatt (kW) in 2021. The average installed cost of wind projects in 2021 was ...

The total cost of an average turbine can range from \$2.5 million to \$4 million, though large offshore turbines can cost tens of millions. The most powerful 12 MW wind turbine costs up to \$400 million to manufacture and

The cost of a wind turbine

install.

Wind turbines continued to grow in size and power, with the average nameplate capacity of newly installed wind turbines at 3 MW--up 9% from 2020 and 319% since 1998-1999. The combined health, climate, and grid-system benefits of ...

Average sized commercial wind turbines cost \$2.6 - \$4 million per wind turbine. You can expect typical costs to be about \$1.3 million per megawatt (MW) of electricity (this is producing capacity). The majority of ...

A wind turbine typically pays for itself after a number of years, but it will have high upfront costs. The average cost of a wind energy project depends on the size of the project (e.g. how many square feet or square miles the project occupies ...

Wind turbine prices averaged \$800-\$950 per kilowatt (kW) in 2021. The average installed cost of wind projects in 2021 was \$1,500/kW, down more than 40% since the peak in 2010. Lower installation costs lead to energy ...

The average cost of a roof mounted wind turbine is around \$3,000-\$4,000 which will also need to be maintained. A roof mounted wind turbine on a domestic property in the UK can save you \$500-800 per year on ...
