

The country's first flywheel energy storage system

What is flywheel energy storage technology?

Flywheel energy storage technology is a form of mechanical energy storage that works by accelerating a rotor (flywheel) to a very high speed and maintaining the energy in the system as kinetic energy.

What are the components of a flywheel energy storage system?

A flywheel energy storage system consists of bearings, a rotating mass, a motor-generator, and a frequency inverter. Fig. 14.4 shows the main components of a flywheel energy storage system. The design of the components influences the overall efficiency, and can help in reducing power transmission losses.

Where is China's first large-scale flywheel energy storage project?

From ESS News China has connected to the grid its first large-scale standalone flywheel energy storage project in Shanxi Province's city of Changzhi. The Dinglun Flywheel Energy Storage Power Station broke ground in July last year.

What is China's first grid-connected flywheel energy storage project?

The 30 MW plant is the first utility-scale, grid-connected flywheel energy storage project in China and the largest one in the world. From ESS News China has connected to the grid its first large-scale standalone flywheel energy storage project in Shanxi Province's city of Changzhi.

Is there a gap between flywheel energy storage technology in China?

The shortcomings of theoretical study and insufficient industrial study severely impede the mass manufacture of flywheel energy storage system. It is generally acknowledged that the gap between the flywheel energy storage technology in China and other developed countries is more than 10 years.

Which country has the largest flywheel energy storage plant?

With a power output of 30 megawatts, China's Dinglun flywheel energy storage facility is now the biggest power station of its kind. The makers of the Dinglun station have employed 120 advanced high-speed magnetic levitation flywheel units. (Representational image) The US has some impressive flywheel energy storage plants.
