

The latest national policy on microgrids

What policies have been implemented to promote the development and adoption of microgrids?

Several countries have implemented policies to promote the development and adoption of microgrids. In the United States, the Federal Energy Regulatory Commission (FERC) has implemented Order-2222, establishing rules enabling microgrids to participate in wholesale energy markets.

How does government support microgrids?

Support for microgrids comes from research and development (R&D) programs at federal and state levels, software and tools, grants and funding support to incentivize demonstration projects, and tax and financial incentives for the installation of distributed energy [2, 3, 6, 126].

Why do we need microgrids?

Microgrids serve as an effective platform for integrating distributed energy resources (DERs) and achieving optimal performance in reduced costs and emissions while bolstering the resilience of the nation's electricity system.

Are microgrids a good investment?

Microgrids that incorporate renewable energy resources can have environmental benefits in terms of reduced greenhouse gas emissions and air pollutants. In some cases, microgrids can sell power back to the grid during normal operations. Depending on the complexity, microgrids can have high upfront capital costs.

What is a microgrid strategy?

The Strategy development process began with microgrid experts deliberating on areas the Strategy should focus on for impactful results in key metrics, such as reliability, resilience, decarbonization, and affordability, in the next five to ten years.

Why are microgrids becoming more popular in the United States?

Microgrids have become increasingly popular in the United States. About 34% of the world's microgrid projects are located in the United States and North America area -- drivers for this fast growth could include the country's aging electricity megagrid and end-use customers' increasing desire for greater security and reliability .

By 2035, microgrids are envisioned to be essential building blocks of the future electricity delivery system to support resilience, decarbonization, and affordability. The Strategy development ...
