

The latest photovoltaic panel rail spacing specifications

What is a power rail PV module mounting system?

The PV module mounting system engineered to reduce installation costs and provide maximum strength for parallel-to-roof, tilt up, or open structure mounting applications. The POWER RAIL mounting system is designed with the professional PV solar installer in mind.

Which solar modules are compatible with QRail?

QRail is compatible with virtually all modules and works on a range of pitched roof surfaces. Solar modules can be mounted in portrait or landscape orientation in standard or shared-rail configurations. Aluminum QRails are available in two sizes to match all climate conditions: Standard and Light.

What is a power rail mounting system?

The POWER RAIL mounting system is designed with the professional PV solar installer in mind. The top-clamping rails utilize a single tool with a revolutionary patented RADTM Fastener for faster bolt placement. The unique shape of the RAD provides an anti-rotation feature, locking the bolt in the proper orientation when installed.

What is the standard spacing for roof rafters?

The standard spacing for roofing rafters is 16 inches and standoffs, which are posts bolted to the roof rafters, are spaced up to 48 inches. If the structure of your roof is non-standard, you may want to talk with an engineer. To pick the right rail, we need to know the combined width of the panels in a portrait configuration.

How many panels on a roof in a portrait layout?

Do the same calculation for the number of panels across the width of the roof (336 inches ÷ 40 inch panels = 8 panels or 8 columns across the horizontal width of the roof. Altogether, you can get 3 rows and 8 columns or 24 panels on the roof in a portrait layout with 12" of room on each side of the array.

How many rails do I need to splice a module?

Each row of modules requires two rails (top and bottom). This system, which has two rows of modules, requires four rails. Further, since I will be splicing two 156" rails in order to reach the required 294.6" rail length, I will need a total of eight 156" rails. 2) Splices (Unirac Master List page 16)

The QRail Series is an innovative rooftop racking system featuring QClick and QSplice technology that simplifies and speeds installation. QRail seamlessly combines with QuickMount waterproof mounts to provide a complete, fully ...

rooftop PV systems to be installed according to the manufacturer's instructions, the National Electrical Code, and Underwriters Laboratories product safety standards [such as UL 1703 ...

The latest photovoltaic panel rail spacing specifications

Contact Eagle Aluminum for information about aluminum solar panel mounting rails and framing systems. We make custom extrusions in a variety of finishes. ... we also offer additional ...

What is a Rail-less Solar Panel System? A rail-less solar panel system eliminates the need for traditional mounting rails. Instead, the panels are attached directly to the roof using specialized ...

adequate access to the attic after construction. It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry ...

L-feet and standoffs are the parts that connect your rail to the roof. The number of L-feet depends on how sturdy of a system you need. In conditions where there is no significant snow load or high wind speed, L-feet spacing of 5 ft or closer ...

For installations on flat concrete rooftops, the "Photovoltaic Power Station Design Specification" provides a formula for calculating the spacing of PV arrays to avoid ...
