

Wind power was once again the most important source of electricity in 2023, contributing 139.8 terawatt hours (TWh) or 32% to public net electricity generation. This was 14.1% higher than the previous year's ...

11   On July 12 of this year, solar photovoltaic energy surpassed its daily production records by reaching a contribution of 211.9 GWh, with which it achieved a share of 25.4% in ...

The project aims to improve North China's power supply capability, while exploring a comprehensive industrial model that combines photovoltaic power generation and salt production with aquaculture.

If all of this capacity comes online as planned, 2023 will have the most new utility-scale solar capacity added in a single year, more than doubling the current record (13.4 GW in ...

The potential for solar energy to be harnessed as solar power is enormous, since about 200,000 times the world's total daily electric-generating capacity is received by Earth every day in the form of solar energy. ...
