

Can a UAV be used to inspect a photovoltaic plant?

For more information on the journal statistics, [click here](#). Multiple requests from the same IP address are counted as one view. Because photovoltaic (PV) plants require periodic maintenance, using unmanned aerial vehicles (UAV) for inspections can help reduce costs. Usually, the thermal and visual inspection of PV installations works as follows.

Can uav photogrammetry be used for Autonomous inspection of PV plants?

The autonomous inspection of PV plants through UAV photogrammetry has been explored in the literature,... The UAV is given a set of waypoints, usually arranged in such a way to cover a delimited area to ensure the required horizontal and vertical overlapping of images.

What are the advantages of UAV inspection of PV modules?

The obtained images of PV modules during UAV inspection are first transformed from RGB mode into single-channel images, for significant reduction of computation and analysis complexity. The filtering process enhances the quality of images of PV modules and the obstacles of gridlines can be eliminated.

What is automated PV inspection?

This technique is a very similar approach to visual inspection (the same failures can be detected as in visual inspection by naked eye). It processes captured colour images. Automated inspection of PV installations is performed by using a RGB sensor/camera, that can also be embedded to UAV platforms.

What is a UAV-based inspection system for large-scale PV systems?

The implemented UAV-based system for inspection of large-scale PV systems consists of an UAV with a set of sensors in different forms and on-board processors, a digital light visible single-lens reflex (SLR) camera for condition monitoring, and a ground control station (GCS).

What are the variables in PV solar aerial inspection?

The main variables in PV solar aerial inspection must be studied to define appropriate values for them. For instance, height limits the number of PV panels that can be inspected at the same time, i.e., the area inspected is directly proportional to the operational height.

**Keywords** Photovoltaic panels, Dirt, Image processing, A\* path planning, UAV With the depletion of traditional energy, the photovoltaic power generation industry has ushered in rapid devel-

This paper proposes a UAV photovoltaic panel inspection path planning method based on an improved particle swarm optimization algorithm. The method optimizes node traversal through ...

For this purpose, a spiral-coverage path planning algorithm is proposed. Additionally, task assignment methods for multi-region inspection with a swarm of UAVs are applied. The ...

This article presented a new approach for autonomous UAV inspection of a PV plant based on the detection and tracking of PV modules through thermal and RGB cameras, which is an alternative to traditional ...

Real-time inspection and fault detection for large photovoltaic arrays based on drones and deep learning algorithms. ... in the solar panel inspection for better performance, ...

In order to improve the safety and efficiency of inspection robots for solar power plants, the Rapidly Exploring Random Tree Star (RRT\*) algorithm is studied and an improved method based on an adaptive target ...

Through combining the existing flexible UAV flight control and advanced image processing and fault detection techniques, the UAV-based system provides a promising prospect for the non-destructive inspection of ...

However, UAV-based inspection of Photovoltaic (PV) arrays is still an open problem. Companies in the field complain that GPS-based navigation is not adequate to accurately cover PV arrays ...

Images collected by a UAV over a solar farm can be processed by an algorithm either in the cloud or on-device. The results of the AI algorithm will tell the quality controller ...

planning algorithm that allows for real-time task allocation and inspection on a per-panel basis. In this paper, we propose a new approach where each panel is embedded with IoT sensors that ...

This paper proposes an automatic photovoltaic panel area extraction algorithm for thermal infrared images acquired via a UAV, which exaggerates the linear features with a vertical and ...

Thus, for an accurate inspection, extracting panels and limiting the diagnosis on their surfaces show up to be essential steps in the process of defects detection. We develop in ...
