What is a backup solar generator?

Backup solar generators provide backup power for when an electrical grid fails, providing an efficient alternative for installing a complete system. Backup solar generators provide enough power to turn on appliances such as refrigerators, washing machines, televisions, and more in the event of a blackout.

Can a solar generator support off-grid living?

Yes. Some generators use electricity or gas for power, and all power generators are able to support off-grid living. However, some people prefer solar generators for the following reasons: They're more eco-friendly because they use energy from the sun as opposed to fossil fuels.

How many watts can a backup solar generator power?

Smaller units typically have a lower power capacity and can only charge small devices. Backup solar generators can typically power at least 1,000 watts, which should be enough to power appliances like small lights, a fridge, or a television.

What is a solar generator & how does it work?

Solar generators convert sunlight into energy to power your devices and appliances when you don't have electricity, making them a perfect item to bring with you on a camping trip, or as a home backup system for running small appliances during a power outage.

Are solar generators portable?

Solar generators are available as both portable generators and backup home generators. Most solar generators are portable, lightweight, and have a built-in handle. The best portable solar generators are used to provide power for construction sites, campers, events, or other settings where access to electricity is limited.

How much power does a portable solar generator use?

The wattage required to run each item may vary, and most portable solar generators can power in the range of 100-500 watts. Smaller units typically have a lower power capacity and can only charge small devices.
