

Does village-scale solar power supply exist in India?

We analyze and synthesize the long-term experiences with three different systems for village-scale solar power supply in India, Senegal and Kenya. Since this scale of electricity provision forms part of village infrastructure, it requires particular types of knowledge, policies and support mechanisms.

How can a village based solar PV system be financed?

They have therefore identified additional financing sources through cross subsidies or government budgets to cover the difference. Similar provisions would be required for solar PV based, village scale electricity supply in smaller towns and villages to guarantee economic survival of these systems.

Can village scale solar power supply be sustainable?

Our cases demonstrate that a variety of sustainable, technical and organizational solutions for village scale solar power supply is possible. However, these conditions do not automatically lead to delivery models that are well adapted to the local contexts.

Can solar power supply be implemented in a village?

Since such solar power supply forms part of village infrastructure, its successful implementation requires other types of knowledge, policies and support mechanisms than individual standalone systems and centralized grid electricity supply as shown by previous studies ,,,,,.

What is a photovoltaic village?

In the Photovoltaic Village (IT), the district is integrated with the industrial surroundings that does not present historical or meaningful elements. Ravine Blanche (FR) is located in an old neighborhood composed by mass housing blocks, without significant architectural quality.

How can government institutions support solar mini-grids and other village-scale power plants?

The cases demonstrate that suitable policies, regulations and government institutions, including individual government officials' acceptance of radically different socio-technical configurations are key to enabling solar mini-grids and other village-scale power plants.
