

Can PV backsheets be recycled?

Considering that the mass of end-of-life PV panels in Japan is estimated to increase to approximately 280,000 tons per year by 2036, PV backsheets are attractive candidates for fluoropolymer recycling, which can be effectively achieved using chemical recycling approach demonstrated in this study.

Can a photovoltaic backsheet be chemically recycled for fluoropolymer recycling?

In this study, we investigated the feasibility of chemically recycling a fluorine-containing photovoltaic (PV) backsheet for fluoropolymer recycling.

What is material recycling of photovoltaic panels?

Material recycling of photovoltaic panels is a crucial step in the entire lifecycle of the photovoltaic industry. Currently, the recycling of PV panels is divided into upcycling and downcycling. In the downcycling process, only the aluminum frame, glass, junction box, and cables are recycled, while the rest is landfilled.

What is photovoltaic waste?

The total amount of photovoltaic waste generated globally reached 45 thousand tonnes in 2016, and is projected to increase to 60 million tonnes by 2050. This waste contains both valuable resources and hazardous substances. The recoverable valuables include aluminum, copper, and glass, which are already being recycled today.

Is there a complete LCA for photovoltaic recycling?

Because PV recycling is a relatively new field, there may not be sufficient data and information available to support a complete LCA. Secondly, with the continuous advancement and innovation of technology, the technology and scale of photovoltaic recycling are also constantly changing.

Are photovoltaic panels regulated?

Following the revision of the Waste Electrical and Electronic Equipment (WEEE) directive in 2012, the collection, transportation, and treatment of photovoltaic panels have been subject to regulation in each individual member of the European Union (EU) since 2014.

A key stage of the EOL solar panel recycling is delamination, whereby the junction box, cables, and aluminum frames are removed, and the EVA/cell/backsheet is delaminated, resulting in metal enrichment.

Using life cycle assessment, scientists at UMSICHT have compared the environmental impacts stemming from the End-of-life (EOL) treatment of fluorine-free and fluorinated backsheet material used in photovoltaic modules. They ...

According to the early-loss scenario and regular-loss scenario, the cumulative waste volumes of end-of-life

(EOL) PV panels will reach 1.7-8 million tons by 2030 and 60-78 ...

The environmentally friendly recycling of end-of-life (EoL) photovoltaic modules is a crucial pathway to achieving "carbon neutrality." However, currently, most efforts are ...

waste will reduce the risk of fluorine supply and enhance the sustainability of domestic industries. PV backsheets are attractive candidates for fluorine recovery. Depending on the type of ...

Two end-of-life (EoL) pathways, namely incineration and pyrolysis for handling photovoltaic (PV) backsheet waste, were investigated using life cycle assessment. Looking at the EoL stage, the fluorine...

EVA/cell/backsheet can be subjected to individual recycling processes to recover copper and silver. Ultimately, the metal enrichment can be recycled to retrieve elements such as silicon, ...

Although the amount of waste photovoltaic (PV)panels is expected to grow exponentially in the next decades, little research on the resource efficiency of their recycling has been conducted so far.

The backsheet serves as a protective barrier that insulates electric components of the solar panel. Backsheet has dielectric strength that prevents its electrical breakdown and it can withstand ...

The separation of PV module backsheets as a function of the ultrasonic power, treatment time, and types of solvent: (a) BP, (b) MEK, (c) Formic acid, and (d) HAc (concentration: 50%, temperature:50

The EU Waste of Electrical and Electronic Equipment (WEEE) Directive entails all producers supplying PV panels to the EU market to finance the costs of collecting and recycling EOL PV panels in ...

Rathore and Panwar et al. (2022) analysed the end-of-life impacts of solar panel waste generation in the Indian context, where the constant reduction in energy payback time ...
