

What are the functions of energy storage fire protection system

What is battery energy storage fire prevention & mitigation?

In 2019, EPRI began the Battery Energy Storage Fire Prevention and Mitigation - Phase I research project, convened a group of experts, and conducted a series of energy storage site surveys and industry workshops to identify critical research and development (R&D) needs regarding battery safety.

Can a battery energy storage system control electrical fires?

However, these systems may be used in the computer or control rooms of an ESS to control any electrical fires. Thermal runaway in lithium batteries results in an uncontrollable rise in temperature and propagation of extreme fire hazards within a battery energy storage system (BESS).

How does a fire protection system work?

In addition to controlling the automated extinguishing system, the fire protection system triggers all other necessary battery management system control functions. As its name implies - "aspirated" smoke and off-gas detection systems use an "aspirator" mounted in a detector unit.

What is energy storage & how does it work?

As the use of these variable sources of energy grows - so does the use of energy storage systems. Energy storage is a key component in balancing out supply and demand fluctuations. Today, lithium-ion battery energy storage systems (BESS) have proven to be the most effective type and, as a result, installations are growing fast.

What makes a successful fire protection system?

Rapid detection of electrolyte gas particles and nitrogen suppression system activation are the key to a successful fire protection concept. Introduced in December 2019, Siemens began offering a VdS-certified fire detection and suppression solution to protect stationary lithium-ion battery applications.*

Can a lithium-ion battery energy storage system detect a fire?

Since December 2019, Siemens has been offering a VdS-certified fire detection concept for stationary lithium-ion battery energy storage systems.* Through Siemens research with multiple lithium-ion battery manufacturers, the FDA unit has proven to detect a pending battery fire event up to 5 times faster than competitive detection technologies.
