Where can I find large-scale solar energy facilities?

All large-scale solar energy facilities can now be found on a single map thanks to a collaboration between the U.S. Geological Survey and the U.S. Department of Energy's Lawrence Berkeley National Laboratory. The interactive map is based on the United States Large-Scale Solar Photovoltaic Database (USPVDB) and is called the USPVDB Viewer.

What is the largest photovoltaic solar plant in the United States?

U.S. President Barack Obama speaks at Semptra U.S. Gas & Power's Copper Mountain Solar 1 facility, then the largest photovoltaic solar plant in the United States on March 21, 2012. The U.S. recently surpassed more than 5 million solar installations across the country.

What is a large-scale solar facility?

The U.S. Energy Information Administration (EIA) classifies all solar facilities with capacities of one megawatt or greater as large-scale and those with capacities of less than one megawatt as small-scale.

How many TW of solar photovoltaic potential are there?

There is approximately 115 TW of solar photovoltaic potential in the U.S., which includes 1 TW on buildings, 27 TW on agricultural land, 2 TW on brownfields, and 2 TW for floating solar. The U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) conducts research to reduce the cost and impact of siting solar.
