Are millimeter wave weapons better than high energy lasers?

Millimeter wave weapons have a larger beam size than high energy lasers and therefore can affect multiple targets at once. High power microwave weapons produce microwaves, which have longer wavelengths than high energy lasers and millimeter wave weapons.

What are directed energy weapons in Star Wars?

In the Star Wars movies, a wide variety of directed energy weapons are depicted, from handheld light sabers to massive, spaceship-mounted laser cannons. What exactly is a directed energy weapon? Are these weapons still science fiction, lab experiments, or are they real? How can they be used and how disruptive can they be?

Are AESA radars a weapon against missiles?

AESA radars mounted on fighter aircraft have been slated as directed energy weapons against missiles, however, a senior US Air Force officer noted: "they aren't particularly suited to create weapons effects on missiles because of limited antenna size, power and field of view";

What is the difference between a DEW and a missile?

Complement to conventional weapons. DEWs use energy fired at the speed of light, making them faster and potentially less costly per shot than missiles. Some DEWs have virtually unlimited ammunition and can fire as long as they have power. Ease of graduated response.

Will South Korea develop a hypersonic missile?

The divided Korean Peninsula is also racing to develop hypersonic weapons. U.S. ally South Korea is pushing ahead with plans to develop its own hypersonic missiles as it seeks a viable missile strike capability in response to North Korea's extensive ballistic missile arsenal.

Is South Korea developing a ballistic missile?

South Korea has already developed short-ranged ballistic missiles and is seeking newer types to hold North Korean targets -- including its mobile ballistic missiles -- at risk during a conflict. For its part, the nuclear-armed North has claimed it is also developing such weapons.
