Relocate all penetrations—including stacks, bathroom vents, and cooktop vents—away from the area where the solar array would go, so the panels can be installed in a regular and even pattern—rather than awkwardly wending around those penetrations.

Can a roof support solar panels?

Make sure your roof can support solar panels. A solar installer, roofing expert, or structural engineer can help you determine your roof's solar suitability.

Should you install solar panels before installing a new solar system?

The time to contemplate any big near-term additions to your electrical needs is before you install solar because expanding an existing system later can be costly and problematic, says Los Gatos, CA, solar installer and energy podcaster Barry Cinnamon. You'll likely need to replace the inverter, and the new panels won't match the existing ones.

Where do solar panels go?

Rooftops are the most common places you'll see solar panels, but you have other options too. Installing solar panels can be a great leap toward electricity cost savings and energy efficiency. But the road to making it happen can be long and tricky. One problem you'll likely encounter: Just where will these panels go?

Can you install solar panels on a garage?

They're niche installations, but you could install solar panels on garages, canopies, pergolas or other structures away from your home. In these cases, less available space means that your solar panels are likely more supplementary in nature, powering a specific area of your home or property rather than your entire home.

On a solar panel's datasheet, this is called its temperature coefficient. To clarify, this coefficient refers to the temperature of the solar panel, not the temperature of the air around it. The average temperature coefficient ...
