What are the uses of solar energy?

The uses of solar energy include solar electricity, solar water heating, solar heating, solar ventilation, solar lighting, portable solar (for personal electronic devices) and solar transportation (for electric vehicles). What are the five main uses of solar energy?

What is solar energy & why is it important?

Solar energy is a powerful source of energy that can be used to heat, cool, and light homes and businesses. More energy from the sun falls on the earth in one hour than is used by everyone in the world in one year. A variety of technologies convert sunlight to usable energy for buildings.

What are the benefits of solar energy?

One innovative product is the Solatube solar attic fan. Solar ventilation technologies also apply to commercial and industrial use applications. These technologies can preheat a building's air in cold climates, which reduces energy costs. 5. & 6. Solar Water Heating Homeowners can also use solar energy to power their water heaters.

How do businesses use solar technology?

Businesses and industry use solar technologies to diversify their energy sources, improve efficiency, and save money. Energy developers and utilities use solar photovoltaic and concentrating solar power technologies to produce electricity on a massive scale to power cities and small towns. Learn more about the following solar technologies:

Can solar energy be used to power cooling systems?

With some science, solar energy can be used to power cooling systems. Developments like desiccant-cooling allow super-efficient evaporative cooling systems to be used, even in high humidity. Solar energy on a commercial scale was (until recently) expensive, inefficient and often unreliable.

How can we use solar energy in our daily life?

An innovative practice to effectively make use of the sunshine is with transportation powered by photovoltaic (PV) energy. Railroads, subways, buses, planes, cars, and even roads can all be powered by solar, and solar transit is becoming a popular offering in the renewable energy sector.
