What are the main features of solar photovoltaic (PV) generation?

Abstract: This chapter presents the important features of solar photovoltaic (PV) generation and an overview of electrical storage technologies. The basic unit of a solar PV generation system is a solar cell, which is a P-N junction diode. The power electronic converters used in solar systems are usually DC-DC converters and DC-AC converters.

What are the energy storage options for photovoltaics?

This review paper sets out the range of energy storage options for photovoltaics including both electrical and thermal energy storage systems. The integration of PV and energy storage in smart buildings and outlines the role of energy storage for PV in the context of future energy storage options.

Which technology should be used in a large scale photovoltaic power plant?

In addition, considering its medium cyclability requirement, the most recommended technologies would be the ones based on flow and Lithium-Ion batteries. The way to interconnect energy storage within the large scale photovoltaic power plant is an important feature that can affect the price of the overall system.

Should solar energy be combined with storage technologies?

Sometimes two is better than one. Coupling solar energy and storage technologies is one such case. The reason: Solar energy is not always produced at the time energy is needed most. Peak power usage often occurs on summer afternoons and evenings, when solar energy generation is falling.

Do PV systems produce or store thermal energy?

PV systems do not produce or store thermal energy as they directly generate electricity and electricity cannot be easily stored (e.g. in batteries) especially at large power levels. However, concentrated solar power systems (CSP) can store energy using thermal energy storage technologies.

What are the different types of energy storage?

The most common type of energy storage in the power grid is pumped hydropower. But the storage technologies most frequently coupled with solar power plants are electrochemical storage (batteries) with PV plants and thermal storage (fluids) with CSP plants.
