What should I do if my solar panel is not working?

Check fuses and breakers, repair broken wires, and tighten connections as necessary. Solar panels can encounter a range of common issues, including faulty wiring, overheating, dirt or damage on the panels, and low or no power output. Faulty wiring in your solar panel system can cause significant setbacks.

What happens if a solar panel is not connected to a circuit?

The solar panels are connected to a circuit system so that there may be problems with the circuit connections of the solar energy. Typically, this problem occurs if the connection is loose or the wiring is broken. If left unaddressed, this could lead to a power outage or even a fire.

How do I know if my solar panel system is working properly?

To ensure the proper functioning of your solar panel system, it is essential to regularly inspect and repair any broken wires or loose and dirty connections. Start by visually examining all the wiring components for any visible signs of damage or wear.

Can a solar panel be repaired?

As long as the damage to the solar panel is limited to microcracks or faulty wiring, they can typically be repaired. While microcracks technically cannot be fixed, the problems they create can be addressed. If your glass is flaking off or delaminated, the entire module must be shipped away for repairs.

What should I do if my solar meter is faulty?

Contact your solar panel installer or a solar panel maintenance professional. If your generation meter is replaced, make sure you get a letter from the installer stating what they have done and that they changed the meter because it was faulty. The paperwork should also state the model and serial numbers of the old and new meters.

What should I do if my solar inverter goes off?

If it trips back to the off position, leave it off and call an engineer. Also check your inverter for any fault codes or error messages. Check the real-time and cumulative generation on your inverter (most have these options) to make sure that the solar panels are still generating electricity.
