

# Whether the photovoltaic panels are powered after installation

Should I add a solar energy system to my roof?

You may be considering the option of adding a solar energy system to your home's roof or finding another way to harness the sun's energy. While there's no one-size-fits-all solar solution, here are some resources that can help you figure out what's best for you. Consider these questions before you go solar. See the Spanish version [here](#).

Should you go solar if your home is not suitable for solar?

If your home is not suitable for rooftop solar, you can still get the benefits of clean energy by investing in a community or shared solar program. By going solar, you can play an active role in achieving the nation's goal of a carbon-free electricity sector by 2035. For more information, visit the Homeowner's Guide to Going Solar.

What happens after a solar installation is completed?

After your solar installation is completed, it must be approved by your utility company and/or a city inspector. Your installer will have an estimate for you before work begins.

Can a roof support solar panels?

Make sure your roof can support solar panels. A solar installer, roofing expert, or structural engineer can help you determine your roof's solar suitability.

Should you install solar panels on Your House?

Many homeowners have started adopting the habit of installing solar panels on their houses as a way of saving money and conserving energy. Going solar has become quite sensible given that the cost for a unit has dropped dramatically alongside other tax reliefs and benefits.

Do solar panels need to be replaced?

Solar panels have a productive life of 25 or more years. Before installing solar panels, a roofing contractor or general contractor will inspect the structural integrity of your roof to ensure it can support the weight of a rack and solar panels. This is to ensure that your roof won't need to be replaced before your solar panels wear out.
