

Which house is suitable for installing photovoltaic panels

Should you go solar if your home is not suitable for solar?

If your home is not suitable for rooftop solar, you can still get the benefits of clean energy by investing in a community or shared solar program. By going solar, you can play an active role in achieving the nation's goal of a carbon-free electricity sector by 2035. For more information, visit the Homeowner's Guide to Going Solar.

Is solar energy a viable option for my home?

Your home needs to get plenty of sunlight, have a roof that is big enough and faces the right direction, and you need to pay enough for electricity to make solar panels worthwhile. Here are some tips to help you decide if solar energy is a viable option for your home.

How do I prepare for a solar panel installation?

Installing solar panels helps homeowners save money and invest in cleaner energy. To prepare for an installation, determine your energy needs and home compatibility with a solar panel system. The installation requires complicated electrical work and paperwork that any reliable solar installer can handle.

Should you install a solar PV system in a low electricity rate?

However, homeowners in areas with lower electricity rates may still benefit from the installation of a solar PV system depending on the peak sun hours and available incentives in the area. Most homeowners opt for a rooftop solar installation to maximize their exposure to daily sunlight.

Can a roof support solar panels?

Make sure your roof can support solar panels. A solar installer, roofing expert, or structural engineer can help you determine your roof's solar suitability.

Should you choose solar energy for your home?

Before starting the process of powering your home with solar energy, homeowners should investigate their energy use and consider potential efficiency upgrades. Homeowners should be well aware of their total electricity usage, and consider low-cost and easy-to-implement efficiency measures before choosing solar.
