

Why not use lithium batteries for energy storage

Are lithium-ion batteries the future of energy storage?

As the world increasingly swaps fossil fuel power for emissions-free electrification, batteries are becoming a vital storage tool to facilitate the energy transition. Lithium-Ion batteries first appeared commercially in the early 1990s and are now the go-to choice to power everything from mobile phones to electric vehicles and drones.

Why are lithium ion batteries better than other batteries?

Lithium-ion batteries have higher voltage than other types of batteries, meaning they can store more energy and discharge more power for high-energy uses like driving a car at high speeds or providing emergency backup power. Charging and recharging a battery wears it out, but lithium-ion batteries are also long-lasting.

What are lithium-ion batteries used for?

Not only are lithium-ion batteries widely used for consumer electronics and electric vehicles, but they also account for over 80% of the more than 190 gigawatt-hours (GWh) of battery energy storage deployed globally through 2023.

Are lithium-ion batteries bad for the environment?

(Lead-acid batteries, by comparison, cost about the same per kilowatt-hour, but their lifespan is much shorter, making them less cost-effective per unit of energy delivered.)² Lithium mining can also have impacts for the environment and mining communities. And recycling lithium-ion batteries is complex, and in some cases creates hazardous waste.³

Are lithium-ion batteries worth it?

Fluctuating solar and wind power require lots of energy storage, and lithium-ion batteries seem like the obvious choice--but they are far too expensive to play a major role. A pair of 500-foot smokestacks rise from a natural-gas power plant on the harbor of Moss Landing, California, casting an industrial pall over the pretty seaside town.

Why do lithium-ion batteries need to be recycled?

“Recycling a lithium-ion battery consumes more energy and resources than producing a new battery, explaining why only a small amount of lithium-ion batteries are recycled,” says Aqsa Nazir, a postdoctoral research scholar at Florida International University's battery research laboratory.
