

Wind Leaf Power Generation Company Port

Are offshore wind farms a US port?

Under the accepted interpretation of the Jones Act, the offshore wind farm or project site is considered a United States port, and as such, only United States flagged vessels can transport materials between the marshalling port and the project site.

Will a floating wind turbine stand beside a crane at Long Beach?

Within about a dozen years, floating wind turbines -- as tall as the Eiffel Tower -- will stand alongside the cranes and cargo containers at the Port of Long Beach as part of the largest offshore wind turbine facility in any U.S. port.

Are New Jersey wind Port & Port of Paulsboro Public-Private Partnerships?

Both the New Jersey Wind Port and Port of Paulsboro are public-private partnerships (PPP) - a model for financing and developing infrastructure that could unlock the financial resources necessary for OSW infrastructure development elsewhere in the United States.

How many berths do you need for a WTG installation port?

For the current generation of WTGs, an installation port requires up to 70 acres, with a minimum of two heavy lift berths of 650 feet (200 meters) each with a depth at berth, turning basin, and along the access channel of at least 36 feet (11 meters).
